

To whom it may concern

Thank you for taking time to review my application and resume. I have performed both Solutions Architect and Engineer roles over the last 25 years in a variety of organisations. I am comfortable in the Microsoft Ecosystem and work regularly with AWS and Ubuntu Linux.

I have 5 years' experience working with AWS services as an Engineer and Developer and am comfortable with Lambda/S3/DynamoDB/EC2/IAM/ECS/ECR and many more including SSO/Organisations and deploying Landing Zones. I am also comfortable creating and working with containers and app modernisation.

I spent several years as a MSSQL DBA and have experience using MySQL and PostgreSQL and AWS RDS. I employ DBATools.io/PowerShell for most of my RDMS administration and have used a range of monitoring tools including: CloudTrail, Solarwinds, PRTG, Idea Server Manager, DELL KACE, syslog, Spotlight and Aggregators like Splunk.

I have a very active interest in technology and have been part of many migrations/rationalisations and transformative exercises. I consider myself a life learner and usually have several side projects on the go at any one time.

My developer experience has been largely ColdFusion, ASP VB.Net some JAVA and more recently NodeJS and Angular. I can learn languages/frameworks/markups quickly and most recently added Terraform to my IoC languages along with CDK and CloudFormation

Regards
